

Arsalan Shaikh

Frontend Engineer | React & AI-Assisted Development

+91-9284799416 | arsalan4frontend@gmail.com | India

Portfolio: arsalanshaikh.netlify.app | LinkedIn: iarsalanshaikh | Github: arsalanshaikh | Medium: arsalan-shaikh

PROFILE:

- Frontend Engineer with 3 years of experience building responsive, high-performance web applications using React, TypeScript, and Next.js.
- Delivers pixel-perfect, accessible interfaces with deep expertise in component architecture, React Hooks, state management (Redux), and UI performance optimization.
- Claude Code expert leverages AI-assisted development to accelerate prototyping, debugging, and feature delivery by up to 2x, with hands-on experience managing AI agents for complex development workflows.
- Published npm package author (auto-react-theme) with experience building design systems using Material UI, Chakra UI, and Styled Components.
- Comfortable across the full stack (Node.js, Express, MongoDB) enabling independent end-to-end feature delivery and seamless backend collaboration.

TECHNOLOGY ARRAY:

Frontend

- React.js, React Hooks
- Redux
- JavaScript, TypeScript
- ES6+
- HTML5, CSS3
- SASS, SCSS, Styled Components (CSS in JS)
- Next.js
- Bootstrap
- Material UI, Chakra UI

AI Dev

- Claude Code, Codex, GitHub Copilot, OpenAI API
- Prompt Engineering
- AI Assisted Development , AI Agent Management

Database & Data Visualization

- MongoDB, Mongoose
- SQL, SQLite, Redis, Celery
- Plotly.js, Chart.js

DevOps & Testing

- AWS (S3)
- Docker
- Git, GitHub
- Jest, React Testing Library

Backend

- Node.js, Express.js
- RESTful APIs, WebSocket(Socket.IO), WebRTC
- Microservices Architecture
- Django, Python

EDUCATION:

Full Stack Development Program

Masai School (2022 - 2023)

Master of Engineering (M.E.)

Savitribai Phule University, Pune (2017 - 2019)

MBachelor of Engineering (B.E.)

North Maharashtra University, Jalgaon (2013 - 2016)

CERTIFICATIONS:

Anthropic Claude Code | Full Stack Web Development | Figma for Developer | Django (Python) Web Framework

PROFESSIONAL EXPERIENCE:

● FULL STACK DEVELOPER

BayOne Solutions (Remote) | May 2023 - Present

- Engineered an admin dashboard with ticket management, user analytics, and Plotly.js visualizations enabling leadership to track KPIs and cut decision-making time.
- Delivered candidate assessment dashboards with secure JWT authentication and granular role-based access control across 3 user tiers (admin, recruiter, candidate), ensuring data isolation and compliance.
- Built reusable React component libraries and responsive layouts using Material UI, reducing UI development time across the team and ensuring design consistency across modules.
- Architected and shipped scalable MERN applications, enforcing clean architecture patterns that reduced bug rates and improved page load performance.
- Designed and delivered multi-tenant platform modules for TechScore.ai, enabling 10+ organizations to operate on a single deployment with isolated data and configs.
- Spearheaded development of an AI voice interview agent using OpenAI's real-time API, implementing automated scoring and analytics that streamlined candidate evaluation.
- Launched a Docusaurus-powered documentation site that reduced new-hire onboarding time and became the single source of truth for internal knowledge.

● FULL STACK DEVELOPER (TRAINEE)

Masai School | Apr 2022 - Apr 2023

- Shipped 5+ full-stack web applications in a 2,160-hour intensive hands-on development program.
- Worked in agile team sprints with daily standups, code reviews, and Git-based collaboration mirroring real engineering workflows.
- Built production-grade features using React, Node.js, Express, and MongoDB with end-to-end ownership from design to deployment.

● DESIGN ENGINEER

BECIS (Berkeley Energy) & SunShot Technologies, Pune | Dec 2019 – Apr 2022

- Performed structural analysis and load optimization for solar energy infrastructure using analytical modeling tools developing the systems thinking and data-driven problem-solving approach now applied to building scalable software architectures.

OPEN SOURCE PROJECTS:

Auto-react-theme (npm package | GitHub | Live)

- Open-source React package published on npm that auto-switches light/dark themes based on local time with manual override, SSR compatibility, and zero-polling architecture.

Crypto Price Tracker Browser Extension (GitHub | Live)

Chrome extension for real-time cryptocurrency monitoring with interactive historical charts, portfolio tracking, price alert notifications, and offline data caching via CoinGecko API. Built with TypeScript, and Tailwind CSS, featuring multi-currency support, rate-limit handling, and dark/light mode toggle.

ResumePilot (GitHub | Live)

- AI-powered resume analysis app built with React and TypeScript, featuring ATS compatibility scoring and job description matching via OpenRouter API with Clerk authentication.

AI Round table (GitHub | Live)

- Real-time multi-model AI chat app built with Next.js and TypeScript, featuring SSE streaming, live typing indicators, and concurrent interactions across GPT-4o, Claude, Gemini, and DeepSeek.

Blueprint AI (GitHub | Live)

- AI-powered product planning and design platform with guided workflows, multi-model AI assistance for generating context-aware data models, persistent workspaces with auto-save, and exportable handoff packages ready for AI coding agents.
